

Features

· RoHS Compliant

- · High Luminance 250 nits
- · Single CCFL, Sidelight type
- · Replaceable structure of lamp units
- · WSVGA (1024 x 600 pixels color display)
- LVDS display data interface
- · Applications: hand-held mobile devices

ANDpSi056ET0S-HB

5.61" WSVGA Color p-Si TFT LCD Module

The ANDpSi056ET0S-HB is 1024 x 600 Color TFT display that utilizes new poly-silicon (p-Si) technology to provide a brighter, thinner and lighter display with high-resolution. The p-Si TFT technology allows the row and column LCD drivers to be fabricated directly on the LCD glass. This eliminates the need for discrete TAB drivers and also reduces the thickness, weight and overall size of the display. The 5.6" WSVGA resolution expands applications in mini-notebook PC's.

Notes

Refer to "Timing Chart" below. If DE is fixed to "H" or "L" level for certain period while CLK is supplied, the panel displays black w/some flicker. If CLK is fixed to "H" or "L" level for certain period while DE is supplied, the panel may be damaged. Please adjust LCD operating signal timing and FL driving frequency, to optimize the display quality. There is a possibility that flicker is observed by the interference of LCD operating signal timing and FL driving condition (especially driving frequency), even if the condition satisfies above timing specifications and recommended operating conditions. Do not make tv, th, thbp and tvds fluctuate. If tv, th, thbp and tvds are fluctuate, the panel display black. In case of using the long frame period, the deterioration of display quality, noise, etc. may be occurred. CLK count of each Horizontal Scanning Time should be always the same. V-Blanking period should be 'n' X "Horizontal Scanning Time". (n:integer) Frame period should be always the same.
